SpendWise: A Simple Backend Learning Project

Date:	4 march 2026
Team ID:	SWTID-2026-2725
Project Name:	SpendWise
Maximum Marks:	4 Marks

Ideation Phase

Brainstorm & Idea Prioritization

1. Brainstorming

- Brainstorming is the process of generating different ideas to solve a problem. Our team discussed several ideas related to backend development projects that could be useful for students and easy to implement. The goal was to choose a project that helps us learn backend technologies such as APIs, databases, and server-side programming.

Ideas Generated

- **Expense Tracker System** – A system to track daily income and expenses.
- **Student Task Manager** – A system where students can add and manage their tasks.
- **Library Management Backend** – Backend system to manage books and users.
- **Simple Budget Planner** – A system to plan monthly spending.

2.Ideas Generated

- **Expense Tracker System** – A system to track daily income and expenses.
- **Student Task Manager** – A system where students can add and manage their tasks.
- **Library Management Backend** – Backend system to manage books and users.
- **Simple Budget Planner** – A system to plan monthly spending.

3. Idea Prioritization

To select the best project idea, we compared the generated ideas based on the following criteria:

- **Ease of implementation**
- **Learning value**
- **Practical usefulness**
- **Time required for development**

After evaluating all ideas, **SpendWise** was selected because:

- It is simple and suitable for learning backend development.
- It helps After evaluating all ideas, **SpendWise** was selected because users track their daily expenses.
- It allows us to practice CRUD operations (Create, Read, Update, Delete).
- It can be expanded later with additional features such as reports and analytics.

4. Final Selected Idea

The final idea selected by the team is **SpendWise – A Simple Backend Learning Project**.

The project will include the following features:

- Add new expense records
- View all expenses
- Update existing expense details

- Delete expense records
- Categorize expenses

The backend will manage all the data and provide APIs for handling expense information.
