SpendWise: A Simple Backend Learning Project

Ideation Phase

Define the Problem Statements

Date:	4 march 2026
Team ID:	SWTID-2026-2725
Project Name:	SpendWise
Maximum Marks	2 Marks

Customer Problem Statement:

1. Target Customer

- College students, young professionals, and individuals who want to manage their daily expenses but find it difficult to track their spending regularly.

2. Customer Problem

- Many people do not track their daily expenses properly. They spend money on small items like food, transport, online shopping, and entertainment without realizing how much they are spending in total. Because of this, they often run out of money before the end of the month.

3. When the Problem Occurs

- This problem usually occurs during daily spending activities such as shopping, paying bills, eating outside,

or making online payments. People forget to record their expenses or do not have a simple system to track them.

4. Impact of the Problem:

Due to poor expense tracking:

- ✓ People cannot control their spending.
- ✓ They are unable to save money effectively.
- ✓ Monthly budgets get disturbed.
- ✓ Financial stress increases.

5. Proposed Solution – SpendWise:

- ❖ SpendWise is a simple expense tracking system that helps users record their daily expenses and monitor their spending. It allows users to categorize expenses (food, travel, shopping, etc.), view monthly summaries, and understand where their money is going. This helps users manage their money better and develop good financial habits.

6. Expected Benefits:

- ✓ Easy tracking of daily expenses
- ✓ Better money management
- ✓ Improved budgeting
- ✓ Increased savings awareness
