Project Design Phase

Proposed Solution Template

Date	4 march 2026
Team ID	SWTID-2026-2725
Project Name	SpendWise
Maximum Marks	2 Marks

Proposed Solution Template:

S.No	Parameter	Description
1	Problem Statement (Problem to be solved)	Beginners learning backend development often face confusion when trying to build a complete application. They may understand individual topics like APIs or databases but struggle to combine them into a structured backend system. This makes it difficult for them to understand authentication, database operations, and API communication in a real project environment.
2	Idea / Solution Description	SpendWise is a beginner-friendly backend project developed using Node.js, Express, and MongoDB. It provides a simple user authentication

S.No	Parameter	Description
		system where users can register and log in securely using JWT tokens. After authentication, users can manage their data through CRUD operations, helping learners understand how backend APIs interact with a database.
3	Novelty / Uniqueness	The uniqueness of SpendWise lies in its simplicity and educational focus. Instead of building a complex production system, the project focuses on teaching core backend concepts such as authentication, middleware usage, database integration, and REST API structure in a clear and organized way suitable for beginners.
4	Social Impact / Customer Satisfaction	SpendWise supports students and beginner developers by giving them a practical learning tool for backend development. It improves their technical skills, confidence in building APIs, and understanding of real-world backend workflows. The project also promotes accessible learning because it uses free and widely used open-source technologies.
